

- Ideal for high solid viscous slurries
- Cook and/or cool in the blender
 - Achieve your targeted fine particulate and size reduction
- Process 60 lb. frozen blocks or fresh ingredients
- Go from frozen ingredients to a cooked puree in record time
 - Dual zones for heating and/or cooling
 - Steam injection available

Likwifier LORWSS Scrape Surface Blender

Ideal for processes which include fruits or vegetables and require re-hydration or homogenization of complex ingredients. Our LORWSS-500 has a two-zoned, jacketed, scrape surface kettle with a 0-2200 rpm high-speed shear/blending impeller. In conjunction with the blending capabilities the process efficiencies and scrape surface agitator of the unit eliminates the need for a heat exchanger as a process step. Your batch times can be reduced, solids to the dryers can be increased, and the overall process capabilities of your plant can be vastly improved. This unit can process 8,000 pounds of materials per hour. You can meet stringent quality standards with the capabilities of shearing, blending and scrape surface cooking provided by the Breddo Likwifier.

Call to schedule a demonstration in your plant or our lab.
