

# Separators, Inc.

## Disc Washer

Cleaning "take down" separators and clarifiers is hard work, very time consuming, and can cause damage to the discs and carrier.

The **Separators, Inc. Disc Washer** has changed all of that. Utilizing an air agitation system test has proven that even the most stubborn disc can be cleaned easily in less than an hour and it's easy. All that is needed is to place the disc stack and carrier on a special design carrier support. The stack is then lowered in to the wash tank and spread. A basket is supplied for cleaning small parts, valves, etc. Then just add hot water and nonfoaming detergent and let the **Separators, Inc. Disc Washer** do all the work.

- All tanks are constructed of 14 gauge stainless steel with 2B finish.
- Air pump is 1½ HP
